

GOLOMON

Powering Progress

COMPANY PROFILE

A Brief Overview of Our Business

COMPANY OVERVIEW

Golomon Limited is a Technology Solutions Provider (TSP) delivering integrated IT products, services and solutions that empower organizations to build, modernize, manage and optimize their technology environments. Headquartered in Nairobi, Kenya, Golomon serves organizations across the country through a comprehensive portfolio spanning IT Consulting & Tech Services, Cloud Computing, Software Development & Software-as-a-Service (SaaS), Technology Licensing & Procurement, Cybersecurity, Artificial Intelligence (AI) and Automation. Leveraging a robust ecosystem of technology platforms, leading vendors and specialist partners, Golomon designs and delivers integrated, business-focused solutions that simplify complex IT environments, strengthen operational capabilities and connect the systems, infrastructure and technologies organizations need to thrive. Through a commitment to innovation, efficiency and technology-driven transformation, Golomon enables businesses to enhance performance, optimize operations and build scalable, secure and future-ready digital environments that support sustainable growth.

Golomon Ltd Overview

Industry/Sector:
Information Technology (IT)

Business Type:
Technology Solutions Provider (TSP)

Location:
Muthaiga, Nairobi, Kenya

BUSINESS BACKGROUND

Golomon was established in response to the growing demand for integrated, practical and commercially viable technology solutions that align with business objectives and support sustainable growth. As organizations increasingly depend on technology to drive efficiency, competitiveness and innovation, many continue to navigate fragmented IT environments characterized by legacy applications, manual processes, disconnected systems, standalone infrastructure and disparate technology service providers. These challenges often result in operational inefficiencies, limited visibility, duplicated effort, elevated costs and constraints on scalability as well as digital transformation.

We addresses these challenges through a business-outcome-driven approach to technology, combining strategic advisory, technical expertise and integrated solutions to help organizations align their technology investments with operational priorities and long-term business goals. Rather than operating solely as a supplier of IT products, we work collaboratively with clients to understand their business models, strategic objectives, operational challenges, existing technology environments and growth ambitions. This enables us to develop and deliver tailored solutions that reflect each organization's unique requirements, available resources and evolving needs.

To deliver these capabilities, we leverage a broad ecosystem of technology platforms, hardware manufacturers, software vendors, distributors, cloud service providers and specialist implementation partners. This ecosystem enables us to identify, combine and implement appropriate technologies and expertise based on each client's business context, technical requirements and investment priorities. By adopting a flexible, vendor-aware and solutions-oriented approach, Golomon helps organizations avoid one-size-fits-all technology decisions and pursue solutions that deliver measurable business value.

MISSION & VISION

- **Our Mission**

To help businesses harness technology to simplify operations, improve performance and achieve sustainable growth through practical, integrated and scalable solutions.

- **Our Vission**

To be a trusted leading technology solutions partner, enabling businesses to achieve sustainable growth through technology.

To achieve this, we are committed to:

- Understanding Our Clients:
  - We listen, understand the business and design technology around real needs, objectives and growth ambitions.
- Delivering Practical Solutions:
  - We provide integrated, fit-for-purpose and scalable technology that solves real business challenges.
- Creating Measurable Value:
  - We focus on outcomes that improve efficiency, productivity, visibility, reliability and overall business performance.
- Pursuing Excellence and Innovation:
  - We combine technical expertise, disciplined delivery and continuous innovation to ensure our solutions remain relevant and effective.
- Building Trusted Partnerships:
  - We operate with integrity, accountability and responsiveness, building lasting relationships with our clients and technology partners.

OUR CORE VALUES

The principles that guide how we operate

Professional Integrity

We uphold the highest standards of ethical conduct, transparency, and accountability in everything we do.

Industry Collaboration

We build strategic partnerships and leverage collective expertise to deliver integrated solutions and shared success.

Technology Innovation

We harness emerging technologies and forward-thinking solutions to drive transformation and sustainable competitive advantage.

Client Centricity

We align our solutions with our clients' business objectives to deliver measurable value and lasting impact.

OUR TECHNOLOGY SOLUTIONS & SERVICES

Our capabilities span technology advisory, procurement and licensing, software development, cloud computing, cybersecurity, data management, artificial intelligence and technology-enabled business applications. Through our ecosystem of technology vendors, manufacturers, distributors, cloud providers and specialist partners, we help organizations identify, acquire, implement, integrate and manage fit-for-purpose technology solutions that deliver measurable business value and support sustainable growth.

- **IT Consulting & Technology Services**

We provide strategic technology advisory, IT infrastructure management, systems integration, application implementation and technical support, aligning technology capabilities with business priorities to improve operational efficiency, resilience and performance.

- **Technology Licensing & Procurement**

We facilitate the sourcing, licensing and acquisition of software, enterprise applications, cloud subscriptions, hardware and other technology products through established vendor and distribution partnerships, helping clients make informed technology investments aligned with their operational requirements and budgets.

OUR TECHNOLOGY SOLUTIONS & SERVICES

- **Cloud Computing**

We deliver cloud infrastructure, platforms and software services across Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS) and Software-as-a-Service (SaaS), enabling scalability, flexibility, resource optimization and business continuity.

- **Cybersecurity**

We provide cybersecurity solutions and services that protect organizational networks, applications, systems and data against cyber threats, unauthorized access, data breaches and evolving security risks, strengthening digital trust and operational resilience.

- **Software Development & Software-as-a-Service (SaaS)**

We design, develop, deploy and manage bespoke software applications, enterprise solutions and SaaS platforms that streamline business processes, enhance user experiences as well as support scalable digital operations.

- **Artificial Intelligence (AI) and Automation**

We develop and implement intelligent solutions, predictive models and automated workflows that enhance productivity, streamline operations, improve decision-making and unlock new opportunities for innovation and competitive advantage.

OUR WORK PROCESS

At Golomon, our work process is designed to ensure that every technology engagement is clearly understood, professionally delivered and aligned with measurable business outcomes. From the initial consultation through implementation and ongoing support, we work closely with our clients to deliver practical, scalable and value-driven technology solutions.

Step 1

Business Discovery

We begin by engaging with the client to understand their business objectives, operational challenges, existing technology environment and specific requirements. This enables us to identify the underlying needs and define the desired business outcomes.

Step 2

Solution Design

We assess the client's current systems, processes, infrastructure and technology requirements. Based on our findings, we develop a fit-for-purpose solution that may combine business applications, software, hardware, infrastructure, integrations, development, licensing and support.

This structured process helps maintain clear communication and reliable outcomes for every project.

OUR WORK PROCESS

Step 3

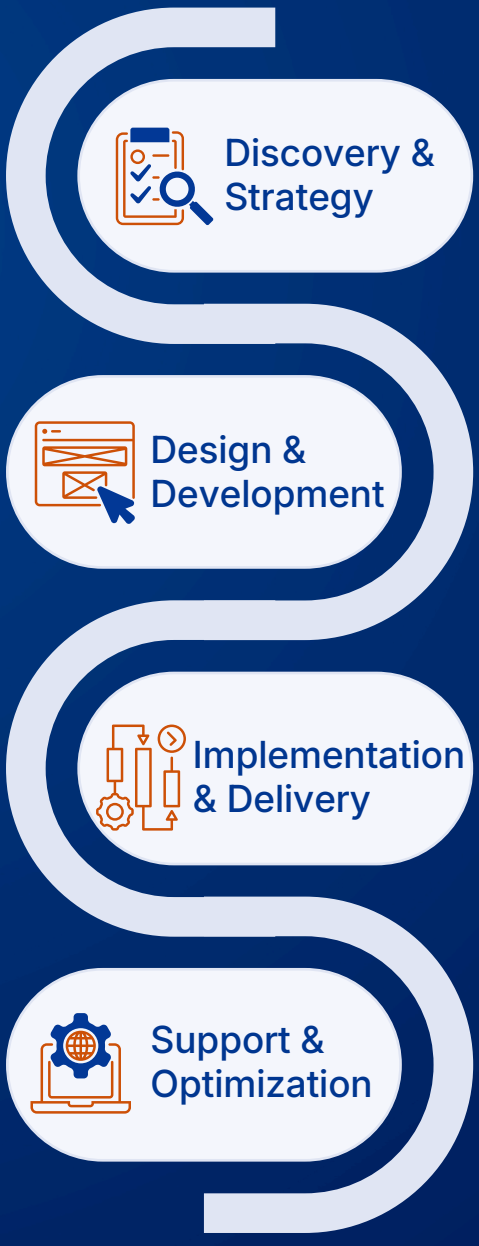

Implementation and Delivery

Once the solution, scope, and commercial terms are agreed, we coordinate procurement, deployment, configuration, development, integration, migration, testing and user training as required. Our implementation approach focuses on quality, security, efficiency and delivery within the agreed scope and timeline.

Step 4

Support and Optimization

Following implementation, we provide ongoing technical support, maintenance, monitoring, licensing and lifecycle management. We work with clients to resolve issues, optimize system performance, identify improvement opportunities and ensure their technology continues to deliver value as their business grows.

WHY CHOOSE GOLOMON

1 Professional and Structured Delivery

We apply disciplined processes, clear project governance, and structured workflows to ensure every engagement is delivered efficiently, transparently and to a high professional standard.

2 Clear and Responsive Communication

We maintain open, timely, and purposeful communication throughout every engagement, ensuring expectations are clearly understood, progress is visible and stakeholders remain aligned from planning through implementation and support.

3 Practical, Scalable Solutions

We deliver fit-for-purpose technology solutions designed around real business requirements. Our approach balances functionality, scalability, efficiency and cost to ensure technology investments deliver sustainable business value.

4 Client-centred Partnerships

We take the time to understand each client's objectives, operational environment and growth priorities. By working collaboratively and building trusted relationships, we provide solutions and ongoing support that evolve with our clients' needs.
